

Data Consultant

We help build data-driven organizations -- where decisions are taken pragmatically, and based on quantitative evidence. We have a product that makes this easier: to analyze and visualize large data. We are looking for people who can understand its capabilities, and help build a customer base that uses it effectively.

What will you work on?

You will work on engagements building analyses and visualizations that help the client make right decisions faster. You will manage the client engagement and be involved throughout the complete lifecycle from business problem understanding, through data analysis, visualisation design and development, client implementation and training. You manage a team of analysts, designers and developers who would report into you, and act as the single point of contact for the client to ensure that they leverage our product to derive considerable business value. You will also participate in the sales and pre-sales activities, demonstrating the product in the client's context.

What's needed to be successful in this role?

Your job will require a good command over statistics and data analysis, a thorough hands-on approach to business analysis and problem solving, and a solid grounding in Project Delivery and people management with an ability to drive and achieve desired outcomes.

If you have excellent communication skills, both verbal and written, and have a good understanding of how businesses work, you may be the person for us. If you like working in an emerging field, and aspire to build the new domain of data-driven consulting, we may be the company for you.

You can work out of our Bangalore or Hyderabad Offices
