

# Data Scientist

We help build data-driven organizations -- where decisions are taken pragmatically, and based on quantitative evidence. We have a product that makes this easier: to analyze and visualize large data. We are looking for people who can understand its capabilities, and help build analytics and visualization solutions for our customer.

## What will you work on?

You will help our clients solve real-world problems by tracing the data-to-insights lifecycle: understanding business problems, making sense of the data landscape & footprint, performing exploratory & deep analytics, extracting actionable insights, and helping put together an execution roadmap. You will be in applying data mining techniques, doing statistical analysis, and building high quality Analytics and Visualization solutions integrated with our products.

You will provide expertise on Data Science and Visualization concepts and mentor the teams across the organization. You will also participate in the sales and pre-sales activities, demonstrating our capabilities and solutions in the client's context.

## Skills and Qualifications

- BE/BTech in Computer Science or MCA Degree from Tier-1 colleges (IIT / NIT / Top Engineering colleges from Tier-1 cities)
- Experience in driving Data Analytics and Visualization solutions independently
- Excellent understanding of machine learning techniques and algorithms, such as k-NN, Naive Bayes, SVM, Decision Forests, etc
- Proficiency in working with large databases and using query languages such as SQL
- Excellent programming skills and hands-on experience in Python, Java Script, HTML, Shell scripts and CSS
- Ability to positively contribute to a team and willingness to quickly complete large volumes of work with high quality
- Excellent analytical and critical thinking skills
- Excellent verbal and written communication skills

You can work out of our Bangalore or Hyderabad Offices
